

FOR IMMEDIATE RELEASE

Fayette Pipe Gains NYCSCA Approval

LEMONT FURNACE, Pa., June 20, 2024 – Fayette Pipe, a leading manufacturer of American-made and melted piping solutions, has announced its recent approval by the New York City School Construction Authority (NYCSCA). Effective immediately, Fayette Pipe is included on the NYCSCA's list of approved manufacturers for Section 15510 HVAC Piping and Section 15410 Plumbing Pipe.

The NYCSCA manages one of the largest school construction programs in the U.S., which includes the planning, design, and construction of new and existing school facilities across New York City's five boroughs. The NYCSCA approval underscores Fayette Pipe's commitment to producing piping solutions that meet the rigorous standards required for educational facilities. This includes adhering to safety standards such as maintaining maximum water outlet temperatures at 120°F. to prevent scalding and providing high-quality piping that supports energy-efficient HVAC systems.

"We are honored to have been approved by the New York City School Construction Authority," said Chris Gearing, Vice President of Fayette Pipe. "This approval is a testament to our team's hard work and our relentless pursuit of manufacturing the highest-quality pipe available, reinforcing our position as a trusted supplier in the industry."

Fayette Pipe continues to prioritize innovation, quality, and customer satisfaction in its operations. The company recently introduced FayetteGuard™, a specialized LED UV-cured coating that adds durability and aesthetic appeal to its Schedule 7, 10, 40, and 80 pipe. A complete line of carbon welded and galvanized nipples are manufactured by Fayette Nipple, a sister company.
